MARKET REGIME

WEEKLY MARKET REGIME · XAUUSD / GOLD

HIGH-VOLATILITY BULLISH EXPANSION

The XAUUSD sequence progressed from approximately the 4,060s toward the 4,350s target area across the reporting period. The weekly structure therefore demonstrated bullish expansion accompanied by aggressive intraday corrective moves. Short positions primarily captured corrective and pullback phases, while later buy positions aligned with the broader bullish expansion.

Unrealized performance on this position is excluded from all Week 01 realized figures and will be recognised in the reporting week in which the call is closed. The position is disclosed here so that the reported period remains a complete record of every call issued, not only the calls that were settled within it.

METHODOLOGY & DISCLOSURE

PIP REPORTING METHODOLOGY

REPORTING CONVENTION

XAUUSD is reported on the Kira Engineer Hub convention: a \$1.00 price movement is recorded as 10 Kira-reporting pips. A \$17.00 move is therefore reported as +170 pips, not +1,700.

ENTRY RANGES

Where a call is issued as a range, the midpoint of that range is used as the reference entry. An entry of 4,066–4,068 is calculated from 4,067.

MULTI-TARGET CALLS

Targets are never summed. The furthest target confirmed as achieved is used as the single recorded outcome, which prevents double-counting.

OPEN POSITIONS

Positions still running at the period close are listed for transparency but are excluded from closed-call counts, win rate and all realized pip totals.

BASIS OF PREPARATION

This report covers the trading calls published to the Kira VIP channel across 02 – 07 AUGUST 2026. Outcomes are recorded against the confirmed exits communicated in-channel. Win rate is calculated on closed calls only (15 of 16 calls issued). Gross winning pips, losing pips and net pips are stated separately so that the cost of the period's single stopped call remains visible rather than netted out of sight.

TEMPLATE CONTROL

KIRA VIP WEEKLY PERFORMANCE REPORT — MASTER TEMPLATE V1.0

Variable fields per edition: week number · reporting dates · trade ledger · outcomes · pips · trader performance · market regime · open positions · weekly highlights. The visual system, grid, typography and page architecture are fixed.

DISCLOSURE

Historical performance does not guarantee future results. This report summarizes the trading call outcomes recorded for the stated reporting period and is not an independently audited brokerage statement. Actual execution may vary due to entry price, spread, slippage, timing and trade management.
