MARKET REGIME

WEEKLY MARKET REGIME · XAUUSD / GOLD

VOLATILE TWO-SIDED EXPANSION

Gold extended from the 4,310s into the 4,440s before the advance stalled in the back half of the week, closing mid-range near 4,376. The direction of the week was bullish, but the path was not: expansion legs were separated by sharp two-sided rotations that stopped entries on both sides. Trend-aligned positions held to their furthest target carried the period, while entries taken into the news windows were the weakest cohort.

WEEK HIGHLIGHTS

METHODOLOGY & DISCLOSURE

WEEK 02

10 – 14 AUGUST 2026

PIP REPORTING METHODOLOGY

REPORTING CONVENTION	Kira Engineer Hub convention. XAUUSD: a $1.00 price movement is recorded as 10 pips, so a $17.00 move is reported as +170 pips, not +1,700. XAGUSD: a $0.01 movement is recorded as 1 pip, so a $0.60 move is reported as 60 pips.
ENTRY RANGES	Where a call is issued as a range, the midpoint of that range is used as the reference entry. An entry of 4,066–4,068 is calculated from 4,067.
BREAKEVEN CALLS	A call closed at its entry is recorded as breakeven: zero pips, and neither a win nor a loss. Breakeven calls count toward closed calls but are excluded from the win-rate basis, so a scratched trade neither flatters nor penalises the ratio.
MULTI-TARGET CALLS	Targets are never summed. The furthest target confirmed as achieved is used as the single recorded outcome, which prevents double-counting.
NON-REALIZED CALLS	Calls that were cancelled before triggering, and calls with no confirmed exit recorded at publication, are disclosed in full but excluded from closed-call counts, win rate and all realized pip totals. They are never quietly dropped from the ledger.

BASIS OF PREPARATION

This report covers the trading calls published to the Kira VIP channel across 10 – 14 AUGUST 2026. Outcomes are recorded against the confirmed exits communicated in-channel. Win rate is calculated on decided calls — 10 of the 11 closed calls, breakeven scratches excluded. Gross winning pips, losing pips and net pips are stated separately so that the cost of the period's stopped calls remain visible rather than netted out of sight.

TEMPLATE CONTROL

KIRA VIP WEEKLY PERFORMANCE REPORT — MASTER TEMPLATE V1.1

Variable per edition: week number · dates · trade ledger · outcomes · pips · trader performance · market regime · non-realized calls · highlights. The visual system, grid, typography and page architecture are fixed.

DISCLOSURE

Historical performance does not guarantee future results. This report summarizes the trading call outcomes recorded for the stated reporting period and is not an independently audited brokerage statement. Actual execution may vary due to entry price, spread, slippage, timing and trade management.
